Economic analyses can inform resource allocation decisions and investments in cancer control programs, including prevention, early detection, treatment, survivorship, and end-of-life care. The global economic burden of cancer is unknown, although data are available in some countries.

### The Economic Burden of Cancer | The Cancer Atlas

Must greater prosperity necessarily lead to a greater carbon footprint and increased greenhouse gas emissions? "In theory, no, but in practice this seems to be the case", says researcher Max Koch from Lund University in Sweden. His study of 138 countries is the first ever to take a global approach to the connections between growth, prosperity and ecological sustainability.
